System Linkages Workgroup Chart: Key

The rows, labeled on the left-hand side of the chart, represent potential components of an integrated system. They are organized by category: General, Managed Care functions, Special functions, Risk Sharing, Integration of Care efforts, Technology, Rate setting, and Partners.

The columns, labeled along the top of the chart, indicate the following:
- Whether or not each component should be present in an ideal system
- Whether or not each component is currently present in the ASO
- Whether or not each component is currently present in the ADAA
- Whether or not each component is currently present in Medicaid Managed Care
- Whether or not each component should/could be present under Integrated Financing Model 1 (Protected Carve-In)
- Whether or not each component should/could be present under Integrated Financing Model 2 (Risk-Based Carve-Out)
- Whether or not each component should/could be present under Integrated Financing Model 3 (Population Carve-Out)

To collect your thoughts and organize the conversations around these topics, the body of this chart should be thought of in terms of Yes or No. We also encourage you to think about other components we may have missed, different ways of grouping these components, or anything else you think would be helpful.
